DESIRE/PURPOSE TO SERVE NAPE IF ELECTED

REGIONAL CHAPTERS SUPPORT & STRENGTHENING: The national NAPE body has built a reputation for itself. I will work to create more regional Chapters whenever possible and regularly evaluate the challenges and strengths of the current Chapters to identify ways to support and make them stronger and more active.

STAKEHOLDERS MANAGEMENT & ADVOCACY: As a very active and successful stakeholder manager across my career, I will work to support the executives in our ongoing drive for stronger stakeholder management and advocacy across the various arms of government and her agencies.

NAPE DISTINGUISHED AWARDS: This process has been upscaled very recently. However, will review for current challenges with the process, for a way to better improve and automate this process flawlessly from beginning to the end.

PROFESSIONAL DEVELOPMENT: The opportunity for sabbatical leave for our lecturers will be critically worked on to enhance their exposure, exploring all possibilities with operating and servicing companies. A train-the-trainer project for the academics will also be canvassed and promoted, for the growth of the technical strength of the academics across our universities. Engage NUPRC for the smooth release of research data for students in Nigerian universities

COLLABORATION: Will work to encourage collaboration between the professional members of NAPE in academics and practitioners in the industry. This will enhance a smooth transfer of practical knowledge and exchange of ideas, which will enhance the quality of graduates our universities will produce.

A REVIEW OF OUR LEGACY PROGRAMS: Will encourage the executives to review our legacy programs, such as the NAPE-NMGS mini conference, Annual International Conference, short courses, and our monthly Technical sessions, among others. With the advancement in technology, we will need to review all these legacy programs, bearing in mind their focus and modern trends, to see that these programs deliver maximum value to our esteemed members.
